Copyright

Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the authors agree to automatic transfer of the copyright to the publisher; and that the manuscript will not be published elsewhere in any language without the consent of the copyright holders.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data-bases, video disks, etc., without first obtaining written permission from the publisher.

The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Special Regulations for Photocopies in the USA

Photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee is paid. This fee is US $ 0.20 per page, or a minimum of US $ 1.00 if an article contains fewer than five pages. All fees should be paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 0301-634X, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

Other Regulations

Authors publishing in this journal can, under certain conditions, benefit from library and photocopy fees collected by VG WORT. Authors of German nationality and those resident in the Federal Republic of Germany or Berlin (West), as well as citizens of Austria, Switzerland and member countries of the European Community, may apply to Verwertungsgesellschaft Wort, Abteilung Wissenschaft, Goethestraße 49, D-8000 München 2, for detailed information.

European Journal of Nuclear Medicine

ISSN 0340-6997 Title No. 259

Editor-in-Chief: H. Hundeshagen, Hannover, FRG

Editorial Secretary: G. Thiessen, Hannover, FRG

The **European Journal of Nuclear Medicine** covers the most important developments in nuclear medicine, publishing original articles on such vital topics as diagnosis, therapy with 'open' radionuclides, in-vitro investigations, and methods of radiobiological and radiation protection studies. In addition to a comprehensive summary of the most significant European research results, the journal will also carry a topical survey of all essential data published outside Europe.

Contents: Volume 10 No. 7/8, 1985

P.S. Shepherd, C.R. Lazarus, R.D. Mistry, M.N. Maisey: Detection of thyroid tumour using a monoclonal ^{123}I anti-human thyroglobulin antibody

A.C. Perkins, M.V. Pimm, M.K. Birch: The preparation and characterization of ^{111}Inlabelled 791T/36 monoclonal antibody for tumour immunoscintigraphy

H. Kelbæk, J. Fogh, T. Gjørup, K. Bülow, B. Vestergaard: Scintigraphic demonstration of subcutaneous abscesses with ^{99m}Tc-labeled leukocytes

P.J. Mountford, M.J. Allsopp, F.M. Hall, C.P. Wells, A.J. Coakley: Leucocyte and contaminant cell-bound activities resulting from the labelling of leucocytes with ^{111}Inoxine

J. Martin-Comin, M. Roca, J.M. Griñó, C. Paradell, A. Caralps: Clinical usefulness of ^{111}In-oxine-labeled autologous lymphocytes in kidney-graft rejection

E. Lubin, Z. Shapira, M. Melloul, A. Youssim: Scintigraphic detection of vascular and urological complications in the transplanted kidney: 133 cases

Animal Models in Radiotracer Design

Editors: **R. M. Lambrecht, W. C. Eckelman**

1983. 57 figures. XIV, 234 pages
Cloth DM 98,–; approx. US $ 36.60
ISBN 3-540-90878-1

Contents: Animal Models in Biomedical Research and Radiotracer Design. – The Development of Radiotracers that are Substrates for (Catecholamine) Uptake$_1$ and Uptake $_2$. – Monoclonal Antibodies: The Design of Appropriate Carrier and Evaluation Systems. – Small Animal Oncological Models for Screening Diagnostic Radiotracers. – ^{111}-In-Labeled Platelets for the Detection of Vascular Disorders in Animal Models. – Animal Models in the Study of Hepatobiliary Radiotracers. – Experimental Models and Evaluation of Animal Data for Renal Radiodiagnostic Agents. – Index.

Radiotracers with applications in research and radiopharmaceuticals intended for clinical medicine are developed using extensive animal testing prior to human use. The choice of the animal model plays a critical role in the eventual success or failure of animal studies in predicting the *in vivo* human activity.
This book with a foreword by W. H. Beierwalters presents information on the effect of the choice of animal species on the development of radiopharmaceuticals and radio tracers. In seven chapters by thirteen authors, it covers such topics as: basic concepts, monoclonal antibodies, small animal tumor models, labeled platelets, hepatobiliary radiotracers, renal radiodiagnostic agents, and substrates for (catecholamine) uptake$_1$ and uptake$_2$.
Animal Models in Radiotracer Design is based on a series of highly successful workshops organized by the Radiopharmaceutical Science Council of the Society of Nuclear Medicine. With a wealth of detailed tables and references, it will be an invaluable reference and guide for everyone involved in the design and evaluation of animal trials for tracer and pharmaceutical development.

Advances in Immunity and Cancer Therapy

Series Editor: **P. K. Ray**

This brand new series focuses its attention on topics related to immunity and cancer immunological phenomena in the diagnostic, prognostic and therapeutic aspects of cancer. The physiological, biochemical and hormonal reactions influencing the immunological functions in the cancer host will also be discussed.
Since no other annual series exists to cover this rapidly emerging field, its continuously updated information will be of benefit to readers in a variety of disciplines, ranging from oncology and surgery to immunology, biochemistry and microbiology.

Volume 1

Editor: **P. K. Ray**
With contributions by H. Blomgren, P. D. Cooper, M. G. Hanna, Jr., H. C. Hoover Jr., M. E. Key, K. J. McCormick, C. Ogier, B. Petrini, T. B. Poduval, P. K. Ray, P. Reizenstein, M. Seshadri, P. H. Sugarbaker, J. Wassermann

1985. 24 figures, 11 tables. Approx. 220 pages
Hard cover DM 138,–. ISBN 3-540-96083-X

Contents: Cells responsible for tumor surveillance in man: effects of radiotherapy, chemotherapy and biological response modifiers. – Immunity and its role in Conventional Cancer Therapy. – Immunologic methods of Diagnostic and Prognostic Value in Tumor bearers. – Complement and Cancer: Activation of the Alternate Pathway as a theoretical base for immunotherapy. – Role of carcinoembryonic antigen assay in the management of cancer. – Active specific immunotherapy as an adjunct to the treatment of metastatic solid tumors: Present and future prospects.
